Subject:	Welding on Van Beest Products is prohibited		
Note:	Main dimensions, general info and warnings can be found in our latest catalogue		

Question: Is it allowed to weld on (Van Beest B.V.) lifting equipment?

Answer:

No!

The Van Beest products are treated with well designed heat treatment, what results in a certain Minimum Break Load and other specific mechanical properties.

These properties will be destroyed by the heat of welding. It even can initiate extreme hard spots and initial cracks, that will decrease the strength and fatigue life dramatically.

An exception is made for EXCEL[®] GH and PAS products, as these need to be welded to a surface to function. For these items, please follow the instructions that are available at Van Beest B.V.

If you have further questions, please do not hesitate to contact us.
Kind regards,

Van Beest Product Management
